

HOW STATIONARY MIXERS SAVE YOU MONEY

1

FUEL COSTS

One of the things you will notice when using a Kirby Stationary Mixer is that you will use half as much fuel and feed the same number of animals. Customers have told us that they find themselves fueling up their delivery box unit half as often.

2

ELECTRIFICATION

Kirby Stationary Mixers are solely run on electricity. This translates to meeting Airboard requirements with ease, while saving money from increased efficiency over diesel powered mixers.

3

SPEED

A Kirby Stationary Mixer allows for maximum feeding efficiency. Once a TMR is mixed and unloaded, the loader handler can begin mixing the next load while the previous mix is being delivered. This equates to minimal downtime of the mixer.

4

WEAR AND TEAR

An added benefit to using a Kirby Stationary Mixer is less wear and tear on your mixing unit. Many customers have noticed that wear items such as knives and flighting last longer due to their mixers running less per load.

5

EXACTLY WHAT YOU NEED

With Kirby Stationary Mixers, there is no one size fits all approach. We custom build the system to your exact needs and specifications. You'll increase your savings from having everything you need and nothing you don't.
